ACTIVITIES & RESPONSIBILITIES

Responsible for managing multiple parallel deliveries with regards to priorities:

- Manage the various delivery projects according to rigorous cost/quality/schedule/risks criterion with high level of engagement towards the project's objectives, while reporting to the R&D manager
- Participate and lead all product development project phases, from initialization to customer delivery.
- Manage risks and changes with all stakeholders; ensure that
- Ensure the smooth and precise communication of requirements from customer to developers.

TECHNICAL SKILLS

- Strong ability in Project Management, risks management (PMP certification is welcome), experience in fixed price contract management.
- Some experience in requirements engineering, functional and non-functional analysis, architecture design, integration, validation
- Large scientific and engineering culture (System design and integration, telecoms, Information and IT Systems, server and embedded Software, hardware products design, security), ability to understand end-to-end complex systems without the necessity to be an expert in the related fields

PERSONAL & ORGANISATIONAL SKILLS

- Analytical, rigorous and synthetic reasoning
- Strong autonomy and leadership, engagement driven and technically focused, open minded with soft communication skills, used to managing multi-disciplinary R&D teams on complex and system-oriented solutions
- Ability to travel abroad
- Knowledge and keen interest for the energy sector is a plus
- Ability to speak fluent English is compulsory

EDUCATION

- Bachelor or higher degree

PROFESSIONAL EXPERIENCE

- Minimum 7 years in project management of industrial solutions.
- Successful project management during the implementation of complex and multidisciplinary engineering systems and solutions

SOFT SKILLS

- Understanding both business and sw developer point of view
- Demonstrated problem solving skills, high level of determination and positive demeanor
- Good time management skills along with the ability to handle several tasks in parallel
- Solid communication and presentation skills, both verbal and written; the ability to work in a collaborative manner
- Flexibility and adaptability
- Interpersonal relation skills, collaborative spirit, **diplomatic sense**
- Good and proactive communicator in English and Hungarian
- Autonomy, innovation sensitive, technical and quality driven
- Process-level thinking
- Open mind
